# **SIGNIFICANT EVENTS / ACTIVITY**

## **Cal EOC Incident – 2014 Drought**

### **Situational Summary: (No Change)**

- Strong winter storms hit California beginning Wednesday, 2/26, bringing heavy rain and snow across the state. Both Northern and Southern California received significant rain, and the Sierra Nevada's gained substantial snowpack. However, the state continues to be in a severe drought. Reservoir levels remain low despite the recent storms. The drought could result in severe impacts to municipal water supplies, agriculture (plants and livestock) and firefighting capabilities for several months. The State Operations Center (SOC) continues to be activated to monitor the situation statewide, and support regional and local operational areas.
- Drought Task Force leaders begin regional meetings. Task Force leaders traveled to Merced for meetings on Tuesday, 3/4/14. In one week after it was introduced, emergency drought legislation passed both chambers of the California legislature and was signed by the Governor.
  - Thirteen counties and three Native American tribes have proclaimed a local state of emergency as a result of the drought. California Public Utilities Commission (CPUC) orders private water utilities to implement 20% voluntary water use reductions. The CPUC regulates all for-profit water utilities in the state.
  - The snowpack survey conducted on 2/27/14, recorded California snowpack at 24% of normal. A more recent update using automated devices after the recent storm (March 2) shows snowpack at 32% of normal.
- DWR has announced that water essential for health and safety will be delivered through the state water project in spite of the zero allocation policy. Deliveries will be boosted if storms produce enough rain and snow to increase reservoir storage and the snow pack.

## Cal EOC Incident – 2014 Drought (Cont.)

### **Current Conditions:**

- Despite two large storms over the past three weeks, heavy rain and snow would have to fall throughout California very frequently from now until May to reach average annual rain and snowfall levels.
- Now more than two-thirds of the way through the rainy season, many areas in the northern part of the state are at least 15 inches short of average annual precipitation. So it would take more than a half an inch of rain from Redding to Fresno every other day until May to get back to average precipitation in the watersheds that supply most of California's drinking and irrigation water. Even with such precipitation, California would remain in drought conditions, due to low water supplies in reservoirs from the two previous dry years.
